I have the following items looking for a good home. All came from SK hams.

- 1) Heathkit HW101 Transceiver- The radio looks to be in pretty good physical condition. The only thing noticeably needed are the two rubber rings that attach to the Preselector Control. It is unknown when it last worked properly before going into storage.
- 2) Heathkit HP23A Power Supply- Looks pretty good in appearance but is original with no restoration done. Likely needs some work inside before plugging it in and looking at voltages. Been in storage for an unknown period of time.
- 3) CDE Rotator Control- This unit works as it should. I installed a new "start" capacitor (a common problem with these) and replaced the Zener diodes inside.

Would like to sell all three together for \$150, or separately; 101 \$80, 23A \$50, CDE \$40.

Will deliver in St. Louis area.

ALSO WOULD CONSIDER A TRADE for a Knight R100 or Heathkit DX60B and HG10B combo in working condition.

Thanks, Carl
