For Sale: From Julio, AA2KF Call : Julio Reyes 314-578-6781

Up for sale is my LNIB MFJ 941E Versa Tuner II Antenna Tuners are 300 Watt PEP SSB full-featured, switched-inductor antenna tuners. Their features include a wide matching range and a mini-size lighted cross-needle SWR/Wattmeter that reads forward power, reflected power, and SWR simultaneously... and in two ranges!

Their 8-position antenna switch lets you select two coax-fed antennas, random wire/balanced line, or the external dummy load for use through your MFJ 941E or bypassed direct to your rig. Their built-in 4:1 balun and nice cabinet are additional features.

MFJ 941E antenna tuners cover all frequencies from 160 meters through 10-meters. You can use coax cable, random wire, or balanced lines. Match dipoles, verticals, Inverted-Vees, random wires, beams, stealthy whips, SWL receiving antennas, or almost any antenna! Asking \$145 sells for \$199
